

FILT'RAY®

HEALTH & SAFETY POINT-OF-USE FILTRATION

GENERAL OVERVIEW

Point-of-Use Filters are often overlooked in many facilities water management plans when they should be considered as part of a contingency response plan. They are the one method that can be immediately installed, providing a last line of defense against many waterborne pathogens to prevent patients from exposure to *Legionella*, *Pseudomonas* and other life threatening bacteria.

ADVANTAGES

- **Legionella Risk Mitigation**
point-of-use filters help protect your institution from *Legionella* and other potentially fatal waterborne bacterial infections. These products protect your reputation and the health of your visitors, patients, employees, and community.
- **Reduced Operating Costs**
Point of Use Filters include standard plumbing connections, which will minimize any additional installation costs.
- **Regulatory Compliance**
With the increased government regulations, including ASHRAE 188, point-of-use filters should be a part of water management plans.
- **Improved Water Quality**
Point-of-use filters capture bacteria in their hollow fiber membranes, allowing the filtered water to flow to service, providing bacteria and cyst reduction for potable water.

UNPARALLELED PERFORMANCE

- Bubl'air Wash™ patented self-cleaning membrane
- UltraResistant (UR) high flow rate tubular membrane
- Long-lasting filter
- 3x larger microfiltration surface area

INNOVATING WATER HYGIENE
