

HEALTHCARE FACILITIES

FOCUS ON WHAT'S IMPORTANT, WE'LL HANDLE THE WATER

Healthcare facilities continue to face budget and manpower reductions with increased regulations. Kurita America's integrated programs for the healthcare market are designed to reduce the time required to manage water treatment programs while enhancing system efficiency and reliability. By integrating our advanced water treatment equipment and chemical programs, assets are protected from scale, corrosion, microbiological fouling, and energy and water usage is minimized.

HEALTHCARE FACILITIES

Legionella Risk Management

Legionella control in healthcare facilities is essential to providing a safe environment for members, clients and patients. Kurita America offers fully integrated solutions for **advanced filtration**, **secondary disinfection** of potable water, electronic monitoring and record keeping, and increased awareness of present and future standards to **manage waterborne pathogens** and minimize the risk of an incident.

Secondary Disinfection

Secondary disinfection of potable water is being considered by many Healthcare operations to reduce the risk of waterborne pathogens. Kurita America has a complete line of NSF approved options to provide secondary disinfection. Whether **monochloramine**, **chlorine dioxide** or **chlorine** is used, Kurita America's field engineers can provide the proper feed and monitoring equipment and consulting services to minimize the risk.

Advanced Automation

Lumyn™, Kurita America's complete digital, analytics, & control solution platform, unifies treatment applications with intuitive and proactive system management. Measured value is **illuminated through a data-driven interface** that puts system information in the hands of the right people, at the right time, in the right form. Lumyn users can visualize system performance, anticipate and address operational issues before they become system failures, and gain deep insights to possible opportunities to be better tomorrow than today.

Integrated Water Solutions for Boilers

Kurita America's EnergyOUT™ is an integrated water management approach for boilers. EnergyOUT **Reverse Osmosis (RO) technology** removes dissolved ions in boiler feedwater, resulting in reduced water discharge, lower fuel demand, less chemical usage and reduced carbon emissions. Designed as a complete system, your plant's soft water make-up is directed to the EnergyOUT skid where RO water is produced, stored, and pressurized for introduction into your feed water system.
